VIBRATING WHEELS

MANY TIMES, AFTER A LARGE SNOWFALL, CUSTOMERS EXPERIENCE MILD TO WILD VIBRATIONS. THIS CAN OCCUR FROM THE STEERING WHEEL OR THE ENTIRE VEHICLE. THE MOST COMMON CAUSE OF THIS IS SNOW OR ICE BUILD UP IN THE WHEELS. THE FANCIER THE WHEEL, THE MORE LIKELY THIS IS TO HAPPEN. YOUR WHEELS ARE BALANCED IN 5 GRAM INCREMENTS, CHUNKS OF SNOW OR ICE ARE MUCH HEAVIER THAN THIS AND CAN CAUSE TERRIBLE VIBRATIONS. THE EASIEST WAY TO CURE THIS PROBLEM IS TO SIMPLY PRESSURE WASH YOUR WHEELS.
